

NEXT LEVEL HORTICULTURE

GROWING TO THE NEXT LEVEL

ARE YOU READY TO TAKE IT TO THE NEXT LEVEL?

WHAT IS IT?

Our Bloom A & B soluble nutrients provide all of the necessary micro and macro nutrients necessary for optimal growth, flower quality and phytochemical production during the bloom stage. Our formulas are pH balanced and made with a blend of high-grade elemental compounds designed to provide complete and balanced nutrition that is immediately available to the plants for uptake and assimilation. Our Bloom formula works to bring out your plants full genetic potential through select minerals and the balance between them necessary to produce next level crops. There is no need for any additional bloom boost products as they are built-in to the formulations. This ensures the plants are always getting an adequate and balanced amount of nutrition specific to the bloom stage as the nutrient strength is increased week by week. Our products have been trusted and proven to save money and increase plant production in some of the largest grow operations in the country with incredible results. This professional grade base with chelated micronutrients is the next level in plant nutrition for cannabis production at any level. Made by growers, for growers.

HOW + WHEN TO USE IT...

Use throughout the entire bloom/flowering phase. Always use equal amounts of A & B. Add the A side first and mix. Once mixed and dissolved into solution, add the B side and continue mixing. Check your solutions EC & pH then water the plants. Make sure to add your source water EC value to the final expected solution EC.

	Bloom (g / gal)							
	Week 1	Week 2	Week 3	Week 4	Week 5	Week 6	Week 7	Week 8
Bloom A	3.5	4	4.5	5	5	5	4.5	4
Bloom B	3.5	4	4.5	5	5	5	4.5	4
Approx EC (A + B)	~1.8	~2.0	~2.2	~2.4	~2.4	~2.4	~2.2	~2.0

NEXT LEVEL HORTICULTURE LLC

HOW IT WORKS...

- By providing a complete and balanced nutrient solution in an easy to use 2 part formula.
- The product easily dissolves in water and is immediately available for uptake by plant roots.
- Formulated to maximize cannabis flower growth, yield, quality and phytochemical production.
- Reduces input costs and maximizes returns for growers at any scale.
- It can be used directly by weighing out just the amount needed or it can be made into a stock concentrate for use with automated injection systems.
- The nutrient solutions run completely clean through all irrigation/fertigation systems and will not foul up reservoir tanks, irrigation lines or clog up emitters.
- The product formulation is pH balanced and ideal to use with most water sources without needing to adjust the pH.

PRO TIPS...

- Inoculate your roots with mycorrhizal fungi and beneficial bacteria.
- Keep the products in a dry place and keep open bags sealed in a plastic container to prevent moisture accumulation as the products are hygroscopic in nature. Weigh out the amount needed then immediately close and seal the bags. Do not leave the bags open to the environment for extended periods.
- The products excel in soil-less substrates such as coco coir and rockwool.
- Regularly test your media EC and pH to ensure proper levels of nutrition are achieved and maintained.
- Get your source water analysed for irrigation suitability.
- Don't pay for water. Pay for the nutrients and add your own water.
- Keep good records so you can consistently produce excellent results with your favorite strains.
- Smell the flowers.
- Tell your friends and family.
- With excellent genetics & Next Level Soluble Nutrients, you'll be growing at the speed of light!

**The use rates in the chart are approximate. Regular testing of the media EC and pH should be done to ensure proper levels of nutrition are achieved and maintained.*
